FINISAR

Finisar Corporation manufactures and supplies optical communication products with emphasis on breakthrough technologies. It has a family of 13,000 employees worldwide, a corporate footprint in eleven (11) countries with customers all around the world.

Problem Statement

Finisar, intended to utilize its data more effectively and leverage from reports and dashboards that can provide insights related to yield and cycle time using data pertaining to man, machine, material and method. Furthermore, tractability of components during production and supply chain life cycle along with predictive analysis that can reveal failure patterns are critical to increasing productivity and enhance efficiencies.

Solution

Inseyab proposed MicroStrategy as the tool of choice that met all the needs and requirements that Finisar put forth. It was utilized to create predictive models as well as Self-service BI that aided in the generation of ad-hoc analysis with the added ability to collaborate and make actionable dashboards in a matter of minutes.
